

Forklift Power Skip

The **Cashels Forklift Power Skip** is a uniquely designed product which gives full tip and crowd to the bucket. It is used to increase the versatility of the forklift/teleporter in loading meal, grain, vegetables, sand, gravel etc.

This product has been developed to work as a measuring device for its load. It is available with either a 0.5m³, 0.75m³ or 1.0m³ bucket.

The load is measured when the bucket is filled and is level with the top of the sides.

The hydraulic action requires supply from a third service on forklifts (i.e. side-shift).

Key Features:

- Robust construction.
- HARDOX cutting edge.
- Universal fitting to all forklifts with secure method of attachment.
- Comes with quick coupling flat-faced hydraulic connections.
- All pivot points are bushed and greased for long life.
- Safety pin to secure the unit to the forklift prongs.
- Bucket has a smooth floor and sides - no protrusions inside which could retain part of the load.
